

Energy Transition

TRANSPORTATION ELECTRIFICATION

A roadmap to clean energy vehicle

As the largest producer of greenhouse gas emissions in the U.S., the transportation industry's decision to transition to electric power makes a significant impact on emissions reduction. By lowering the demand for harmful fossil fuels from gas-reliant transportation, residential and business customers can join the clean energy future by purchasing, embracing and sharing electric vehicle (EV) resources.

We drive the future of energy efficiency.

Our transportation electrification portfolio includes comprehensive solutions for program implementation, as well as single-focus efforts that accelerate our sustainably powered future.

① EV adoption

Put everyone in your community in the driver seat with easy program setup, cohesive omnichannel promotions and end-to-end incentive administration that make purchasing EVs exciting and accessible.

② Fleet electrification management

Fast change begins with the electrification of large fleets. From employee education to securing proper funding, we'll guide your customers or organization through the transition process with holistic solutions that include all the tools and training needed for a successful fleet transformation.

③ Shared charging solutions

Transitioning to EVs requires a careful balance of infrastructure improvements and incentives to align customer demand with the data management needs of energy providers. We'll drive you beyond the initial setup and site evaluations with full-scale incentive processing, detailed analytics, marketing outreach and more. Our EV charging solutions can adjust to the varied needs of residential and business customers, fleet charging, and multi-family properties—delivering solutions for all.

CLEAResult ATLAS™

Our unifying technology solution at a glance:

- ✓ Universally compatible management platform
- ✓ Vastly increased speed to market
- ✓ Near-limitless program scaling and expansion
- ✓ Streamlined third-party integration
- ✓ Cost-effective program delivery
- ✓ Increased average savings per customer
- ✓ Improved customer engagement and satisfaction

Key areas of focus

Equipment

Supporting new technologies like electric vehicles or sustainable solar in the market.

Adoption

Bringing high-quality clean energy equipment to homes, businesses and communities.

Manage

Remotely managing direct response ready equipment in the area to reliably support the grid.

We change the way people use energy, *for our future.*
