

Lower costs. Higher comfort. True Community Credit Union

Jackson, MI

The Challenge: How can a 44,000 sq ft building like True Community Credit Union (TCCU) ensure efficient airflow while managing comfort preferences for 100 employees on a hybrid work schedule? TCCU discovered their existing equipment lacked the necessary flexibility and control, leading to higher energy consumption. When TCCU learned about the available Consumers Energy rebates and programs for business customers, they were eager to seize the opportunity to update their systems.

The Solution: After Consumers Energy assessed TCCU's headquarters and provided upgrade recommendations, the next steps were simple. A Trade Ally installed a building automation system and ventilation and air handling controls at TCCU, providing them with enhanced temperature and air quality control. This provided the technology TCCU needed to adjust temperature and air quality to their employees' hybrid schedules.

The Result: With the support of Consumers Energy and the upgrades at their headquarters, TCCU reduced their annual energy consumption by 127,023 kWh and gained improved control over their HVAC system.

These upgrades not only resulted in energy and cost savings but also offered TCCU the flexibility to manage energy throughout the building, aligning with the wants and needs of their modern workforce.

Project Details

- **Upgrades:**
 - Building Automation System
 - Air Handling Unit Controls
 - Enhanced Ventilation Control
- **Overall Incentive:** \$30,970
- **Annual Electric Savings:** 127,023 kWh
- **Annual Natural Gas Savings:** 2,642 Mcf
- **Annual Cost Savings:** \$54,000
