

Design Build

Energy efficiency at scale

Creating efficient energy solutions can often require innovation and creativity. Ideal for large commercial and industrial facilities, our team can assess, design and deliver projects for even the most complex energy challenges. When an off-the-shelf or packaged solution just won't meet your goals, our team can build out your own custom-engineered project from concept to completion.

We create custom energy improvements.

Meeting the site-specific energy needs of your facility is easy with our experts by your side. Our Design Build team specializes in turnkey, end-to-end development and delivery of new systems and retrofit energy projects that ensure your efficiency goals are reached using all incentives available.

① Project management

Energy is our business, and our team of experts will ensure that any project we take on is correctly scoped, analyzed and implemented professionally from start to finish.

② Design

Developing a comprehensive project plan is a critical first step in reducing your energy use. Our team will work with yours to identify all project requirements and design the project scope. The same team will then stick with you through completion to guarantee success.

③ Build

With your project design in hand, it's time for your vision to come to life. No matter the depth of assistance required, we'll handle and support construction across all phases, including following up with performance measurements and verification after installation.

④ Management and consulting

Improving energy efficiency is an ongoing effort. After the finishing touches, we'll continue our partnership together to make sure your systems are running as they should while also identifying any additional opportunities for further improvements and savings.

Proven pay backs that protect our planet

68+ projects
up and running

\$50M+
in total project value

175+ MWh
saved annually

\$11M+
in annual energy savings

\$8M+
in total incentives processed

2-5 year pay backs
for most investments

Getting the job done, step by step

Assessments

Analyzing commercial energy systems to find new ways to improve efficiency.

Design

Providing custom-tailored designs for critical systems that save energy and money long-term.

Build

Getting to work on your energy-saving improvements with a vendor of your choice.

Management

Maintaining and improving your systems for commissioning and even more savings.

We change the way people use energy, *for businesses.*
