MANAGEMENT AND CONSULTING

A partnership built to last

In addition to the structure and support that we provide through every step of your design build journey, we'll be there to continue making improvements after the project is up and running. Our management and consulting capabilities provide you with reliable and convenient resources to monitor, analyze and report on your projects long after you've completed them. From ensuring the optimal performance of your current energy equipment and systems to planning out your next reduction targets, our flexible support model is there for you any time you need it.

We deliver on continuous improvement.

Making a commitment to energy efficiency is an ongoing journey, not a destination. After the finishing touches of your design build projects are in place, we'll maintain our partnership to make sure that all facilities are operating as they should, while also identifying any additional opportunities for further energy performance improvements—and savings.

① Monitoring, tracking and reporting

Once your newly designed energy efficiency measures are installed, we'll routinely check that everything is running smoothly, make enhancements for monitoring-based commissioning (MBCx), and report any maintenance or repair needs for continued energy savings.

② Consulting

Our team of design build engineers draw on decades of experience and full immersion in the latest industry developments to continue delivering innovative solutions long after you wrap up your current energy improvements. Every person we bring onto your project will be dedicated to keeping your process feeling fresh, engaging and successful from start to finish.

Proven pay backs that protect our planet

68+ projects
up and running

\$50M+
in total project value

175+ MWh
saved annually

\$11M+
in annual energy savings

\$8M+
in total incentives processed

2-5 year pay backs
for most investments

Getting the job done, step by step

Assessments

Analyzing commercial energy systems to find new ways to improve efficiency.

Design

Providing custom-tailored designs for critical systems that save energy and money long-term.

Build

Getting to work on your energy-saving improvements with a vendor of your choice.

Management

Maintaining and improving your systems for commissioning and even more savings.

We change the way people use energy, *for businesses.*
